Montevideo

ABOUT ME

Programmer Analyst with experience in Web Development, Video Games, and freelance projects. My core programming skills include Microsoft SQL Server, Railway, Render, PostgreSQL, ExpressJS, Visual Studio Code, ReactJS, NodeJS, C#, JavaScript, HTML, CSS, Git, GitHub, Tailwind, Cloudinary, Bootstrap, and GeneXus.

I am experienced in teamwork, always listening to my colleagues' suggestions and contributing my own. I manage my role and assigned tasks effectively and am always available to assist any colleague who needs it.

I specialize in all aspects of backend development, including requests, tables, and the connection between backend and frontend. As an analyst, I not only develop but also plan and determine what is practical based on the information provided by the client before taking action.

I manage my emotions well at work, which gives me greater clarity when thinking and analyzing both the situation and the ideas I'm working with, even under pressure.

PROJECTS

• **Back-end and data collection at Intachables.com** [LINK](#)

• Started in February 2025 - Completed in April 2025

• **Experience gained:** Freelance Project

• **Technologies used:** Visual Studio Code, TypeScript, React.js, Git, Express.js, Sequelize, PostgreSQL, Node.js, Render, Vercel, Tailwind, Prisma

• **Description:** An e-commerce with a pet theme. Tailored to the customer tastes and requirements, it includes a shopping cart and general information about intachables importaciones and the shipping system.

• **What I did?:** I built the tables, controllers, routes, and their connection to the website's visual interface. I collected data from over 1,500 products, which was then converted to JSON format and uploaded to the database using an algorithm. I implemented a connection to the Mercado Pago payment gateway so users could pay through that method, and I implemented email notifications for the administrator and users using emailJS and NodeMailer. I also managed the domain purchase for the client's website.

Developer on Escape from Dysnomia Videogame [LINK](#)

Started in October 2021 - Completed in October 2021

• **Experience gained:** GameJam +

• **Technologies used:** Unity, Microsoft Visual Studio 2019, C#, Git

• **Description:** A 2D shooter video game with a theme based on Aliens and conspiracy theories. Made for GameJam Plus national in Uruguay from 2021

• **What I did?:** I implemented the health system, basic movements and main attack of the playable character and developed both the menus and the introduction of the game in question.

Developer on Tomás Jorcin Portfolio [LINK](#)

Started in September 2023 - Completed in November 2023

- **Experience obtained:** Personal Project
 - **Technologies used:** Visual Studio Code, HTML, CSS, JavaScript, Bootstrap, Tailwind, Git
 - **Description:** A web page made to learn more about me and my professional profile distributed over several pages(Spanish language).
 - **What i did?:** I designed and developed the entire visual interface of the page using CSS, Bootstrap, Tailwind, and JavaScript. I planned and assembled each section of the page along with its content using HTML, and I uploaded my page remotely by placing the repository of my page on Netlify.
